

Battery verification code

Overview

A universal battery date code chart is a system used by manufacturers to indicate the date a battery was produced. The code is a series of characters printed on the battery, similar to an expiration date. Understanding the date code on a battery can be useful in determining its life expectancy. The battery date code is typically a 2-digit code that represents the year and a letter that represents the month. For example, a battery with a date code of No, the date on a battery does not necessarily indicate an expiration date. It's the manufacture date, and it helps you determine the life expectancy of the battery. However, other factors such as storage conditions can. Chinese battery date codes typically use a different format than other manufacturers. They often feature four characters, with the first two indicating the year and the last two indicating the month. Yes, the date on a battery indicates the manufacturing date. The code indicates the year and month the battery was produced, allowing you to determine the age of the battery.
