

Generators used in power stations

Overview

If you discuss the very basics of electrical engineering and generators, we will find out two different kinds of generators available in the market. 1. Alternating Current or AC 2. Direct Current or DC The first one is alternating current or AC generators. And the next one is DC or Direct. We all know what a Power Plant is. The generating station or power stations are the places where electrical power is produced. Well, the amount of electric power generated. When it comes to power plants, you can always hear the name of diesel generators. In this generator, the electric generator and the diesel engine work together. And as an. There are several generators that you can use for a power plant. Until it is an AC generator or electric generator, you can easily use it. All you need is to make sure that it is capable of.
