

Home battery power supply system diagram

Overview

This diagram includes everything you need to know, from fuse to wire sizes. We have a 12V 100Ah AGM lead-acid battery. We will charge the battery with a 5Amp charger, which equals 60 watts. Then we will have a 500W inverter so you can power your AC loads. Let's start by taking a look at which fuses you will need. For the charger (F1), you will need a 10Amp fuse. We choose 10amps because this is the closest to 5Amps. The charger we will use already has an inline 10A fuse. So we don't have to add one. The power of. What about C-rate?

The normal C-rate of a lead-acid battery is .2C. This means that our 100Ah battery can deliver a nominal charge and discharge. Now we will take a look at the wires sizes. The charger delivers 5Amps to the battery. If we use the table, we can see that we can use a 16 gauge or 1,5mm squared wire. The current from the inverter is 42Amps. The closest we can see in the table is 50Amps. If we.
