

How to use solar panels to power your home devices

Overview

Prior to your solar PV panels being installed, all reputable companies will have carried a computer simulation. Into which they will have fed in details of roof pitch, shading and orientation etc. This simulation will then have calculated the output which you can typically expect to obtain on a yearly basis. Provided things don't. Most inverters (box of electronics which converts the DC produced by your panels into AC that can be used in your home) are capable of monitoring the amount of electricity produced. It's. Provided your panels are mounted at an elevation of over 12 degrees from horizontal they shouldn't require any special maintenance. The rain should keep them clean and if you've got a monitoring system you'll. Unless you've got a battery storage System you'll need to be use the electric produced by your panels as it's produced. If you don't it gets sold. In order for your panels to be efficient they need to be correctly fitted and although your supplier will likely have taken care of this for you here's the main check points. In a perfect world you want a south facing roof at the pitch of.
