

Solar panels on the roof of the gallery

Overview

The Tate Modern is the world's most popular museum of modern and contemporary art, attracting around 5 million visitors each year. The gallery is located in the former Bankside Power Station on The River Thames which last generated electricity in 1981. In late 2015 The Tate Modern, in conjunction with Solarcentury. The solar panels were developed by Solarcentury on behalf of The Tate Modern. The Tate Modern is located in Bankside, central London. Specifically, the gallery is south of The River Thames and just south east of. Particular challenges associated with this project were: 1. Modelling solar panels on a roof as opposed to ground mounts, with panels facing east, south and west. 2. Identifying suitable. The assessment demonstrated that a number of high-rise building developments would be completely unaffected by glint and glare. However, it was. The first step was to identify potential receptors of glint and glare. This was done by inspecting mapping and aerial photography of the surrounding environment. London City.
