

Which lithium battery pack protection board is good

Overview

A protection board consists of integrated circuits (ICs), metal-oxide semiconductors (MOS) switches, capacitors, resistors, negative temperature coefficient thermistors (NTCs), positive temperature coefficient thermistors (PTCs), memory, ID, and other auxiliary devices. You can find protection boards as standard catalog. The main function of the protection board is to monitor the state of charge (SoC), temperature, voltage, current, and state of health (SoH) of the battery pack. The MOS is controlled by the control. All lithium battery cells, BMS, and protection boards undergo certification. UN/DOT 38.3.5 involves the shipping and transportation of lithium batteries. Other certifications include the. All lithium batteries must have a protection board or BMS connected to the battery cells. The customer must also obtain certification for the cell and BMS system. Keep in mind that.
